

IEB ROUTE WITH ONLINE SCHOOLING

Tomorrow's challenges can't be solved with yesterday's thinking.

Technological advancements in every sphere of life, and the rapid rate at which it's impacting the world means that the jobs our children will be filling in the future, probably haven't even been created yet. In this dynamic environment, the right kind of education for your children becomes critical.

A giant leap forward towards the future is that Online School's learners not only receive the right kind of education, but also leave with an Independent Exam Board accredited NSC matric qualification. This alone opens up a world of possibilities for your child, enabling them to become truly global citizens, actively building and participating in a global economy.

Your child needs the kind of education that surpasses, and escapes the confines of the traditional classroom. For parents, the prohibitive costs of private school education that is as inclusive as our offering, may be out of reach. Online School not only bridges the gap between the present and the future, but also the gap between a world-class education and affordability.

At Online School, our track record spans a decade. An exceptionally high pass rate, and a curriculum designed with a global culture of agility and technology, our learners are positioned as academic leaders. A high level of interaction between learner and teacher is established. This means that your child never needs to feel alone, in front of a computer screen.

With individualised attention and specialist teaching staff, your child has the best chance at achieving success in a world that never stops changing.
